

Abrasives In Action

From The Abrasive Solutions Company

Flapwheels

In the Stainless Steel Fabrication Industry

Garryson has been manufacturing flapwheels for 25 years and has a fully automated facility designed and built in-house. Flapwheels remain one of the most versatile abrasive tools in industry.

APPLICATION

Flapwheels are available in a wide variety of sizes and grades and are used on a straight-line die grinder. The high abrasive cloth content gives long product life contained in a compact wheel format.

This makes flapwheels the ideal product in the stainless steel fabrication industry for the removal of rust and paint, blending and cleaning of welds, de-burring and removing corrosion or scale prior to welding or painting. For example, cleaning and finishing a welded joint between a pipe fitting and flange: -

PRODUCT REF: S6050 60mm x 50mm 6mm shank 40 grit 12,600rpm

TIP

Miniature flapwheels from as small as 10mm diameter are available from Garryson for grinding, finishing & polishing of small intricate workpieces.
