

# Abrasives In Action

From The Abrasive Solutions Company

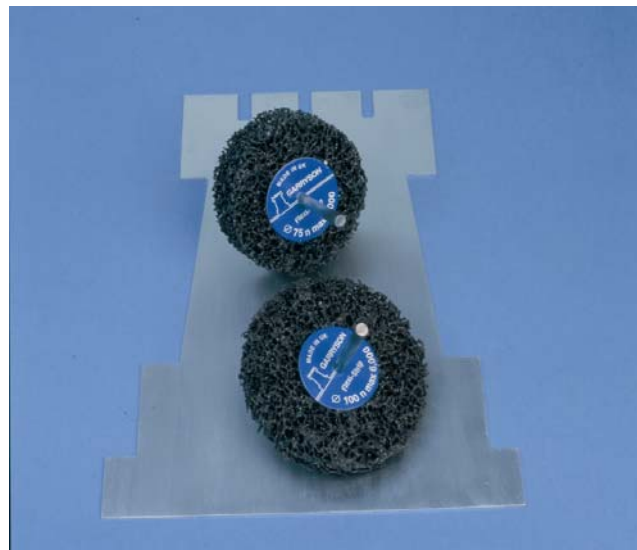

## FLEXISTRIP

### In Welding & Fabrication Applications

Garryson Flexistrip is a three-dimensional, open constructed, non-woven fibre web coated with silicon carbide, available in spindle mounted or disc formats.

### Application

Flexistrip is ideal for the removal of paint, corrosion and scale from all metal surfaces in preparation for welding, the application of primer, or other coatings. The product should be mounted on a suitable straight line die grinder operating at the recommended speed for the particular product diameter being used. Flexistrip leaves a clean surface without the risk of burning, discoloration, undercutting and without altering the overall dimensions of the workpiece.

### TIP

To maximise the effectiveness of Flexistrip, always ensure that the product is run at the correct operating speed.

### Recommended Machines

Make	Model	RPM
Bosch Die Grinder	GG57 500W	7000
Georges Renault	KC 9060-7 (900w)	5500
